

Assignment 1 feedback.

There were a small number of issues that came up a lot in assignment 1 so here is a brief explanation of those issues.

“range or missing ranges”. This refers to not including the ranges of the variables in all of the laws in your domain model.

So for example having (0) $C.m.n = \langle \dots \rangle$, not including the ranges of m and n here.

“explain choice of guards”. Many of you included a line like this

“P0 and P1 and $(m = 100 \text{ or } n = 200) \Rightarrow \text{Post}$ “

I would like you to explain to the reader why you choose “ $m = 100 \text{ or } n = 200$ ”

“layout” This is a general comment that means if I find it difficult to read your work then I will also find it difficult to give credit for your work.
