

## Software Engineering Project 2

### Final Project Documentation Guidelines

Your project documentation is an important part of your project and contributes substantially to your grade. It is also a primary vehicle through which others will get to know and understand the work that you have accomplished.

- Each group will submit **two** reports (user and system)
  - o First draft submitted on Moodle by 23:59 on Friday, Week 11.
  - o Final documentation submitted to Moodle by 23:59 on Friday, Week 13.
    - Submitted by the same person that submitted the drafts.

Your documentation should be well formatted and laid out. Proper referencing is essential. You should cite external references when appropriate. For instance if you mention technologies, facts, etc. in your overview or other sections these should be referenced.

The document should be written in Ocerleaf and downloaded as a pdf and upload to Moodle.

*A note on code:*

- Large pieces of code are not for the final documentation. **Essential** code should be short, minimal, and **must** be in a captioned, numbered figure, and must **be discussed in the text!** Longer code, *if essential and discussed* can go in an appendix.
