

# Comp 3032J Final year project

Abraham G. Campbell (Information I'm not running this 😊 )

# | Final year project

Worth 15 credits

Projects will be group projects  
(usually 3 people)

Project work will take place over 14  
week period in semester 2.

Each group will have a Computer  
Science staff member as supervisor

# How you will pick your projects

- You will be given 12 project descriptions
- You will have only 2 days to read about them and possibly contact the supervisors with questions.
- Please use your UCD email address and your Chinese name in pinyin.
- You will then rank all 12 project in the order in which you would choose them (1 for your favourite, 2 for next favourite etc.)
- We will then choose the project groups and allocate them.
- During the break between semesters your supervisor will probably assign some background reading for you to do to prepare for the actual work.

# Project Conduct

- Before the start of next semester we will provide you with a booklet that gives guidelines on how to do the project as well as indicating the key milestones on the way.
- For example, you will be required to produce an interim report in week 6 and a presentation and final report at the end of the semester.
- The details will be made available to you before the start of the next semester
